ABSTRACTED-PUB-NO: DE 4234787A

BASIC-ABSTRACT:

The plate-like lower part (11) of the box forms the container
and the upper
part (12) is fixedly attached to this lower part on one or
both longitudinal
sides where it can be displaced a limited amt. through a
folding bellows (21)
which is pref. set in the outer area.

The lower part of the box has a longitudinally aligned recess for passing through a strap (2) or belt. The bellows extend over part of the longitudinal sides. The upper part can directly adjoin the lower part on the side opposite the opening (14) of the box, eg. with a moulded projection (23) formed on the upper part and protruding axially over the lower part to form a second chamber. The folded bellows can be fixed to the lower and/or upper parts at their ends by adhesive, welding or rivetting.

USE/ADVANTAGE - Holder and dispenser unit is used to supply unused tissues and store used tissues, and may fit onto the seat belt of a car.

ABSTRACT:

PURPOSE: To hang a tissue paper box on a post or the like by thrusting a plurality of pins, a kind of thumbtack, into the tissue paper box.

CONSTITUTION: A tissue paper box 2 is left about on the floor or something else and not readily available a number of times when it is in need. Therefore, when it is desirable to place the tissue paper box 2 preferably within an easy eyeshot or reach, a plurality of tacks 1, a kind of those pressed into a post or wall, are thrust into the tissue paper box 2 to hang the same. These tacks are also used in a car to hang the tissue paper box 2 in a position

within an easy access of the driver to avoid his careless driving. The one end of a projecting part 1 or metal part is bent at four places of engaging and inserted into a door part.
